

MERRITT TRIES POSTAL DEVICE

Mails Letters on Moving Street Car for Collection.

APPROVES THE BUSINESS AID

Chamber of Commerce Asked to Inspect Device—Model Placed in Rooms of Trade Body—Secretary Grant Commends It—Approved by City Council of Wilmington.

Mailing letters on a moving street car is one of the practical suggestions that Postmaster Norman A. Merritt, has taken up with a view to supplying Wilmington with all facilities possible in sending out mail.

The postmaster recently conducted a series of experiments with the invention, and gave the device a thorough trial. It was found to be all that its inventor, George B. McAllister, has claimed for it. While the postmaster has not given out an official endorsement of the simple apparatus, it is understood that he will be glad to have permission from Congress to equip street cars in the city with this labor-saving device.

Under the present system, collections are made by carriers in all parts of the city, some on foot and others on carts, at stated intervals. The business part of the city is visited more frequently than the residential parts in order to better meet the needs of the business men.

Mail at Crossings.

By the device which Mr. McAllister presents the letter may be mailed at street crossings when the car stops, and, if all cars in the city are equipped with a box, transfers points may be established and collections at that point may be made by carriers or the mail in some cases may be transferred by an official to a car passing the post-office, where an official will be posted to collect it.

The matter is now being brought to the attention of the members of the Chamber of Commerce, and a fully equipped sample of the device has been placed in the rooms of the chamber at Twelfth and F streets, for inspection by the business men of the city.

Application was made to Secretary Thomas F. Grant to have the matter brought to the attention of the Chamber of Commerce, and its mode of working, and expresses himself as being thoroughly satisfied that it will greatly facilitate the collection of mail and be of important assistance to the business community.

Speaking of the device, Mr. Grant said yesterday that it is, in a way, as great a convenience as a special delivery stamp. The stamp operates at the delivery end of the route, while the device operates at the collection end. The ease of installation and the cheapness of the service are points that should be particularly recommended.
